Read before use

- For best results, we recommend using Bambu filaments, which have been rigorously tested for compatibility, safety, and stability with the AMS 2 Pro.
- To prevent the filament getting stuck, do not use flexible filaments such as TPU with a hardness level below 95A or damp PVA in the AMS 2 Pro.
- The AMS 2 Pro supports a spool width between 50 mm to 68 mm and a diameter between 197 mm to 202 mm. We recommend using plastic spools in the AMS 2 Pro. If filaments with cardboard spools are used, it is recommended to pair them with a spool adapter to reduce roll slipping and debris.
- You can use the drying function of an AMS 2 Pro using only a 6-pin cable to connect it to an H2 series printer without an additional power supply. If you need to dry filaments in multiple AMS 2 Pro units, you need to purchase official Bambu Lab power adapters to power the drying function of the other AMS 2 Pro units.
- If using X1 or P1 series printers with one or more AMS 2 Pro units, each unit will require an official Bambu Lab power adapter to power the drying function. Otherwise, the drying function will not be available.
- During the filament drying process, the air intake and vent will open for the AMS 2 Pro to remove moisture through external air circulation. Please ensure the air intake and vent are not blocked, to ensure optimum drying efficiency.

Component introduction

Included accessories

Bambu Bus
Cable 6-pin

Desiccant

PTFE Tube

Connect the AMS 2 Pro to H2 series printers

- ① Place the top glass cover and AMS 2 Pro on top of the printer.
- ② Insert the PTFE tube on the AMS 2 Pro's filament outlet into any PTFE tube coupler of the printer, and push the tube forward for approximately 10 cm until it stops (if you can see the PTFE tube from the window next to the buffer from the front of the printer, it is correctly inserted).

Connect the AMS 2 Pro to H2 series printers

- ③ Take out the Bambu Bus Cable 6-pin from the AMS 2 Pro. Connect it to the printer and either 6-pin port of the AMS 2 Pro.

* The upper and lower PTFE tube couplers correspond to different hotends. Connecting the AMS 2 Pro to the **upper coupler** allows the **right hotend** to print in multiple colors. Connecting it to the **lower coupler** allows multi-color printing with the **left hotend**. Using **two AMS 2 Pro units** allows both hotends to support multi-color printing independently.

Connect the AMS 2 Pro to X1 and P1 series printers

- ① Place the top glass cover on top of the printer.
- ② Use 2 M3*21.5 screws to fix the filament buffer to the printer.
- ③ Insert one end of the 550 mm PTFE tube to the filament outlet of the AMS 2 Pro, and the other end to the left of the filament buffer.
- ④ Insert one end of the 370 mm PTFE tube to the PTFE tube coupler of the printer, and the other end to the right of the filament buffer.

Connect the AMS 2 Pro to X1 and P1 series printers

- ⑤ Connect the L-shape end of the Bambu Bus cable 4-pin to the printer, and the other end to the bottom filament buffer.
- ⑥ Connect the one end of the Bambu Bus cable 6-pin to either 6-pin port of the AMS 2 Pro, and the other end to the left of the filament buffer.
- ⑦ Connect the 24V 4A power supply to the power connector of the AMS 2 Pro.

Remove the desiccant packaging material

Remove the tape from the back of the AMS 2 Pro and take out the desiccant packs. Remove the outer plastic packaging material and install 2 packs of desiccant on each side of the empty space.

Load the filament in AMS 2 Pro

- ① Power on the printer and place a spool of filament in any of the four slots. Make sure the spool is correctly placed on the active support shaft as shown in the picture.
- ② Push the feeder tab towards the spool, and insert the filament. The AMS 2 Pro will pre-load it after it is detected. When the feeder LED light under the filament inlet is on, the AMS 2 Pro is ready to print.

How to use the AMS 2 Pro drying function

Tap  to go to the drying function screen. Select the type of filament to be dried, and set the drying temperature and duration. Then, tap **Start** to begin the process.

* For guidance on using the drying function of multiple AMS 2 Pro units at the same time, please go to wiki.bambulab.com/drying

Regular maintenance

The Bambu Lab AMS 2 Pro is an intelligent system that requires regular maintenance to ensure optimal performance and longevity.

- **PTFE Tube:** Over time, the PTFE tube can experience wear as filament passes through it, leading to feeding issues or clogs. Inspect the tube periodically for signs of damage and replace it as needed to maintain smooth filament feeding.
- **Pneumatic Connector:** If the PTFE tube becomes loose or filament struggles to pass through the pneumatic connector, try reseating the connector or replacing it to restore proper filament flow.
- **Internal Hub Unit:** To prevent excessive resistance during filament loading or unloading, regularly clear any residual filament dust from the internal hub unit.
- **Heating Unit:** Keep the heating unit clean, including the fan and heat sink, to ensure it can effectively dry filament and prevent buildup that could impair performance.
- **Active Support Shaft Assembly:** If the active support shaft assembly is misaligned or damaged, it can cause the gears to mesh improperly. If you encounter this issue, follow the provided guides from the Wiki to reinstall or replace the assembly.
- **Desiccant:** Desiccant packs help maintain a dry environment inside the AMS 2 Pro and prevent filament from absorbing moisture. Periodically check the desiccant and replace it if it has lost its effectiveness.

For more detailed maintenance recommendations, including procedures and suggested intervals, please refer to the "Regular Maintenance Recommendations" section on our wiki.

Specification

Item		Description
Body	Dimensions	372*280*226 mm ³
	Net Weight	2.5 kg
	Housing	ABS/PC
Printing	Filament Supported	PLA, PETG, ABS, ASA, PET, PA, PC, PVA (dried), BVOH (dried), PP, POM, HIPS, Bambu PLA-CF/PAHT-CF/PETG-CF/Support for PLA/PETG, and TPU for AMS
	Filament Not Supported	TPE, generic TPU, PVA (damp), BVOH (damp), Bambu PET-CF/TPU 95A, and other brands of filament that contain carbon fiber or glass fiber
	Filament Diameter	1.75 mm
	Spool Dimension	Width: 50-68 mm Diameter: 197-202 mm
	RFID Identification	Supported
Drying	Highest Temperature	65°C
	Filament Supported	PLA, PETG, Support for PLA/PETG, ABS*, ASA*, PET*, PA*, PC*, PVA*, BVOH *, PP, POM*, HIPS*, Bambu PLA-CF*/ PAHT-CF*/ PETG-CF*, and TPU for AMS*
	Active Moisture Discharge	Supported
	Sealed Storage	Supported
	Temperature and Humidity Detection and Maintenance	Supported. Real-time temperature and humidity can be displayed on the screen, Bambu Studio, and Bambu Handy.
Power	Input	24 V 4 A

* Filaments marked with * require higher drying temperature. The AMS 2 Pro cannot dry them completely. If you want better drying performance for these filaments, we recommend purchasing an AMS HT.
