

# DOB III AC Module

## D57 230V Series

### Application

Down Light

Spot Light

PAR Lamp

### Product Description

12W/15W Power Consumption  
AC 230V Voltage input  
Module Diameter 57mm  
LES Diameter 9.6mm

### Features

High color rendering index CRI(Ra)>80/90  
Small color tolerance MacAdam < 3  
TRIAC dimming compatible  
Uniform Full dimming  
High Power Factor > 0.9  
Low THDi 30%(Typ)  
Low EMI  
RoHS compliant  
No photo-biological hazard: RG1  
Percent Flicker <10%  
SVM <0.4  
CE certification

### Benefits

Module with integrated electronic  
Enables thin designs of luminaries

5ELACN3T23154016	4000	1430	1590	106				

Parameter	Symbol	Min.	Typ.	Max.	Units	Condition
Viewing Angle FWHM	2θ1/2		120		deg	Vop=230V
Operation Voltage	Vop	207	230	253	V	Vop=230V
Power Dissipation	Pd	10.8	12.0	13.2	W	Vop=230V
		13.5	15.0	16.5		
Operation Frequency	Fop		50/60		Hz	Vop=230V
Power Factor	PF	0.9	-	-	-	Vop=230V
Current THD	ATHD	-	30	-	%	Vop=230V
Flicker	-	-	5	10	%	Vop=230V
DF	-	0.9	-	-	-	Vop=230V

Notes:

1. At 230Vac, Ta=25°C.
2. Edison Opto Corp. maintains luminous flux ±10%, Ra ±2 tolerance.

## Chromaticity coordinates( $T_c=25^{\circ}\text{C}$ )

CIE Chromaticity Diagram

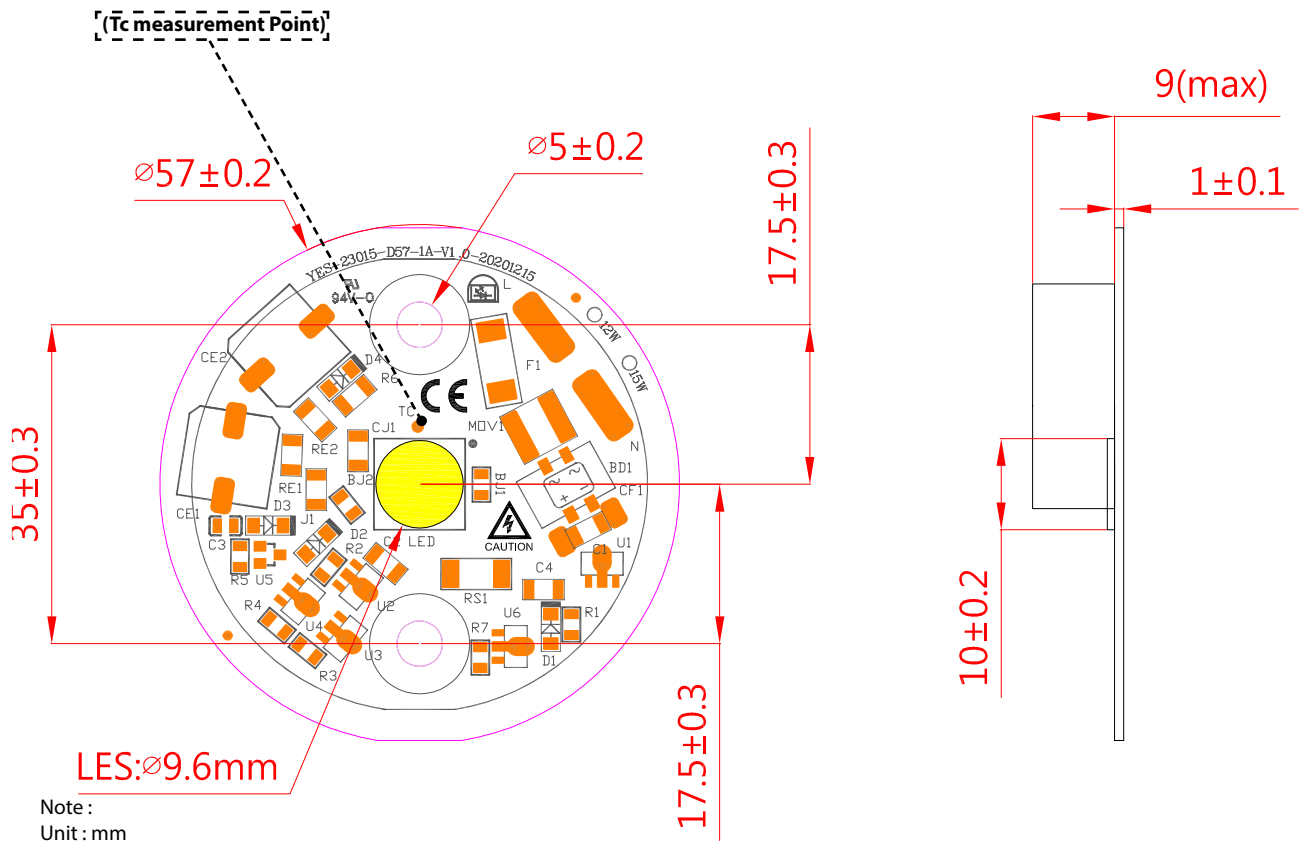

The color ranks have chromaticity ranges within 3-step MacAdam ellipse

CCT	Steps	Cx	Cy	a	b	theta
2700K	3	0.4620	0.4145	0.00810	0.00420	53.42
3000K	3	0.4383	0.4081	0.00834	0.00408	53.13
4000K	3	0.3875	0.3868	0.00939	0.00402	53.43

\*Tolerance of measurements of the chromaticity Coordinate is  $\pm 0.005$

## Mechanical Dimensions

### Emitter Dimensions

## Holder Dimensions (Version A)

### Product description

1. Material : PC
2. Color : White/Black
3. Flame retardant rating : V0

### Application Note

1. Operating temperature :  $-40^{\circ}\text{C} \sim 120^{\circ}\text{C}$
2. Apply on DOB D57 Series
3. M3 screws with flat head , max. head diameter should be no more than 6mm

D57-White

D57-Black

### Product Dimensions

### Ordering Data

Part No	Color	Packaging Bag	Weight per pc.
13CRDAA00116	white	1,200 pcs	0.007kg
13CRDAA00119	black	1,200 pcs	0.007kg

## Holder Dimensions (Version B)

### Product description

1. Material : PC
2. Color : White/Black
3. Flame retardant rating : V2

### Application Note

1. Operating temperature :  $-40^{\circ}\text{C} \sim 120^{\circ}\text{C}$
2. Apply on DOB D57 Series
3. M3 screws with flat head , max. head diameter should be no more than 6mm

D57-White

D57-Black

### Product Dimensions

### Ordering Data

Part No	Color	Packaging Bag	Weight per pc.
13CRDAA00124	white	1,000 pcs	0.004kg
13CRDAA00125	black	1,000 pcs	0.004kg

## Characteristic curve

**Color Spectrum (Tc=25°C,VAC=230V)\_Ra 80**

**Color Spectrum (Tc=25°C,VAC=230V)\_Ra 90**

## Beam Pattern

### SVM Test (Tc=25°C)

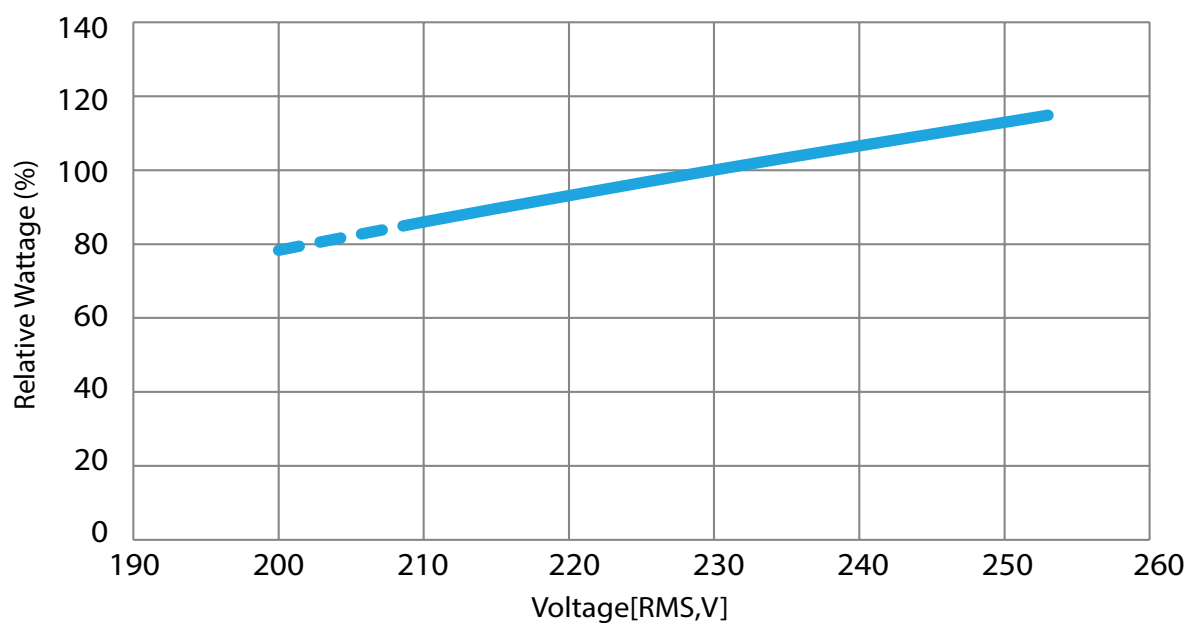

### PST Test (Tc=25°C)

### Relative luminous Intensity vs. Voltage (Tc=25°C)

### Relative Wattage vs. Voltage (Tc=25°C)

### Relative Luminous Intensity vs. Case Temperature

### Relative Wattage vs. Case Temperature (VAC=230V)

### Flicker Performance (During dimming)

## Reliability

NO .	Test Item	Test Condition	Remark
1	Temperature Cycle	-40°C~100°C ( 30 mins / 30 mins )	100 Cycle
2	Operation Life test	Ta = 25°C	1000 hrs
3	ON/OFF Test	3 sec ON, 3 sec OFF	15K times

## Failure Criteria

Item	Criteria for Judgment	
	Min.	Max.
Luminous Flux	0.85	-
$\Delta u'v'$	-	0.006
Resistance to Soldering Heat	No dead lamps or visual damage	

## Cautions

LED avoids being stored and lighted in the environment containing sulfur. Some materials, such as seals, printing ink, enclosure and adhesives, may contain sulfur, avoiding the exposure in acid or halogen environment.

## Product Packaging Information

Part No.	Number of module /Tray	Number of module /Box	Weight
5ELACN3T2312xxxx 5ELACN3T2315xxxx	25pcs	375pcs	5.6KG

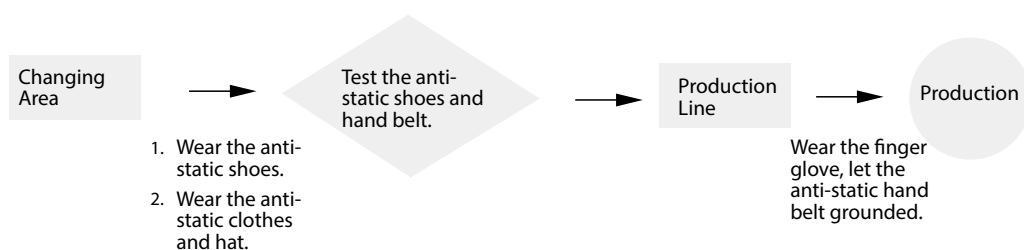

## Handling with a DOB Series

√ Both the light emitting area and white dam over the light emitting area is composed of resin materials. Please avoid the resin area from being pressed, stressed, rubbed, come into contact with sharp metal nail because the function, performance and reliability of this product are negatively impacted.

√ LED device are combine by many accurate parts which belong to static sensitive device. A human body may aware of the discharge voltage about 2-3KV, which is much larger than an electronic device may bear. Therefore, to keep the LED operation environment away from static and lower the exits static become an important issue in a LED manufacture.

1. Anti-Static Steps - All the staffs who has the possibility to contact with the LED components should follow the instructions to eliminate the static:

- Put on the hand or finger gloves before touch a LED device. (Do not use a nylon or rubber Glove )
- Do not do any actions that may generate the static in the protection area. Such as wipe hands or foot, put on/off the clothes.
- Avoid any movement that may cause static damages. When remove a component from the package, please be slow and gentle.
- Do not touch the metal part of a LED component.

2. Environmental anti-static protection

- Use an anti-static floor and make earth. Materials such as plastic or rubber contain carbon or conductive polyester is recommended.
- LEDs should be operated on the desk which is laid by the static discharge material.
- Protection area with a temperature at  $22\pm 5^{\circ}\text{C}$  and a relative humidity at  $70\pm 10\%\text{RH}$  are recommended.
- Layout an appropriate earth system. All the equipment should earth isolated into the ground or pillar.
- All soldering and testing equipment should also provide earth ability.
- Prevent the accumulation and the fractions between stuffs.

### 3. Anti-Static steps for package, transportation and storage.

- Package: All the bags must have the ability of anti-static. Do not use any nylon bag, normal plastic bag or polyester bag for package. Do not open the bag if a LED is not ready to be handling. Open the bag at the protection area and put in a conductive case.
- Transportation: The cart should install the conductive wheels. Avoid the mechanical vibration and impacts.
- Storage: Be attention of the temperature and the relative humidity under the suggest condition.

### ✓ Thermal Management

About 80% of input power of a LED transform into heat. A high temperature operation condition always easily causes the LEDs to decrease of flux and the life decay of LED dies. The highest operation temperature of a component is able to be found in its datasheet which is indicated as  $T_j$ .

The power dissipation ability, the ambient temperature between the LED junction, environment, thermal path and its thermal resistance are the mean parameters which affect the performance of a LED device. Therefore, the limitation of the junction temperature has become an important issue when designing a LED product.

For LEDs, choose an appropriate operation environment and conduct the heat to the air after light on LEDs may maintain the better performance and lifetime. Four major thermal path are :

- (1) From heat source (component) to heat sink. (By conduction)
- (2) Conduction from within the heat sink to its surface. (By conduction)
- (3) Transfer from the surface to the surrounding air. (By convection)
- (4) Emit heat from the heat sink surface. (By Radiation)

Path(1): The contact surface of the component and heat sink are not perfectly flat, they are not able to meet each other completely. Air between these two materials will result high thermal resistance and reduce the effect of heat transfer. To enhance the ability of thermal conduction, one common method is applying thermal grease between the two interfaces and use the screws to enforce the adhesion between two surface.

### Recommended thermal Grease Parameters

Characteristics	Value	Unit
Thermal Conductivity (K)	>3.0	W/m*K
Thickness	≤0.1	mm

- √ DO NOT touch any of the circuit board, components or terminals with body or metal while circuit is active.
- √ DO NOT add or change wires while circuit is active.
- √ DO NOT make any modification on module.
- √ DO NOT use together with the materials containing sulfur.
- √ DO NOT exceed the values given in this specification
- √ Keep cautions not to apply higher voltage above the maximum rating. Otherwise damage may occur.  
Pay attention not to exceed the maximum operation temperature of the Tc Point when the modules are used in an enclosed environment.
- √ DO NOT use adhesives to attach the LED that outgas organic vapor.
- √ DO NOT directly make the HI-POT test over 750V on the module.
- √ DO NOT separately connection L and N terminal when the power source turn on
- √ DO NOT wear any conductive accessories (such as jewelry) which could accidentally get an electric shock.
- √ DO NOT press the product; even a slight pressure may damage the product. The environments such as high temperatures, high humidity or direct expose to sunlight should be avoided since the product is sensitive to these conditions
- √ DOB AC Module uses integrated circuit (IC) which can be damaged when exposed to static electricity. Please operate with antistatic device. Do not touch the product unless ESD protection is used. DOB AC Module can't be installed in end product unless the ESD protection is used
- √ DO NOT assemble in conditions of high moisture and/or oxidizing gas such as Cl, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, NOX, etc. Damage by corrosion will not be allowed as defect claim.
- √ LED Module is recommended for Indoor use only. Longtime exposure to sunlight or UV can cause the lens to discolor.
- √ Please note that BOB AC Module products are driven by high voltage, therefore when operating DOB AC Modules should be very cautious
- √ Faults, lightning, or fast switch may cause voltage surge which surpasses the normal value
- √ The failure of internal component may cause excessive voltages
- √ Storage Precautions:
  - (1) The devices should be stored in the anti-static bag.
  - (2) If the anti-static bag has been opened, please make sure to reseal the bag to avoid air and moisture infiltrate in the bag.

## About Edison Opto

Edison Opto is a leading manufacturer of high power LED and a solution provider experienced in LDMS. LDMS is an integrated program derived from the four essential technologies in LED lighting applications- Thermal Management, Electrical Scheme, Mechanical Refinement, Optical Optimization, to provide customer with various LED components and modules. More Information about the company and our products can be found at [www.edison-opto.com](http://www.edison-opto.com)
