NTE4903 thru NTE4999
Zener Transient Overvoltage Suppressor
Bidirectional

Description:

The NTE4900 series of silicon Transient Suppressors designed to protect voltage sensitive components from high energy voltage transients. Transient over voltage suppressor devices have become very important as a consequence of their high surge capability, extremely fast response time, and low incremental surge resistance (Rs).

Application:

The NTE4900 series has a peak pulse power rating of 1500 watts for one millisecond. Can protect integrated circuits, hybrids, CMOS, MOS, and other voltage sensitive components in a broad range of applications such as telecommunications, power supplies, computers, automotive, industrial and medical equipment.

Absolute Maximum Ratings;

Peak Pulse Power Dissipation (T_A = +25°C) 1500W

$t_{clamping}$ (0 volts to Bv Min) . . . . . < 5 x 10–9 sec

Operating and Storage Temperature . . . . . –65°C to +175°C

Forward Surge Rating 200 Amps, ... 1/20 Second at +25°C

Steady State Power Dissipation . . . . . 5.0 W @ T1 = +25°C

Electrical Characteristics:

Clamping Factor: 1.33 @ full rated power
1.20 @ 50% rated power

The clamping factor is defined as: The ratio of the actual V_C (Clamping Voltage) to the actual BV (Breakdown Voltage) as measured on a specific device.

NTE Type Number	Diagram Number	Maximum Reverse Stand Off Voltage (Volts)	Breakdown Voltage @ I_T (Volts)				Maximum Ratings			Temperature Coefficient of BV%/°C
							Clamping Voltage @ I_{pp} (1msec) (Volts)	Reverse Leakage Current @ V_R (μA)	Peak Pulse Current (Amps)	
		V_R	V_{BR}				V_C	I_R	I_{pp}	
			Min	Typ	Max	I_T mA
