

## OKY3011-1-5V

**Product Name:** AVR ARM PIC DSP SRD-05VDC-SL-C 5V 1 Channel Relay Module Shield for Arduino

**Product Module:** OKY3011-1-5V

### **Product Description:** Brand new 5V relay module

Microcontroller development board can be used as modules, can be used as appliance control.

5V-12V control signal of the TTL.

Control DC or AC signals can control the 220V AC load.

There is a normally open and one normally closed contact

Power LED

Controlled light, pull off, off off

Increased transistor drive a relay coil, the control pin high impedance.

Control pins have pull-down circuit, to prevent floating relay malfunction

### **Products Features:**

Pack Size: 34mm\*26mm\*18mm

Weight: 14g

Voltage: 5V / 12V / 24V at Optional

Warm Tips: Please tell us which voltage you want when make order

Another version

Pack Size: 48mm\*29mm\*18mm

Weight: 16g

Available with: 8051, AVR, PIC, DSP, ARM

Equiped with high-current relay: DC30V 10A AC250V 10A

Warm Tips: Please tell us which voltage you want when make order

### **Package Included**

1×PCS 1 Relay Module
