

OKY3123

Product Name:LM393 Photosensitive Resistance Sensor Module
Photodiode Sensor For Arduino

Product Module: OKY3123

Product Description:

- 1.Using sensitive photosensitive resistance sensor.
- 2.The comparator output signal is clean, good waveform, driving ability, more than 15mA.
- 3.With adjustable potentiometer to adjust the brightness of the light detection.
- 4.The working voltage 3.3V-5V.
- 5.The output form: DO digital switching outputs (0 and 1) and AO analog voltage output.
- 6.A fixed bolt holes for easy installation.
- 7.PCB Size: 3.2cm x 1.4cm.
- 8.Using a wide voltage LM393 comparator.

Package Included

Packing List	Qty
Photosensitive Resistance Sensor Module	1
