

OKY3442-1

Product Name: Relay Controller Soil Moisture Sensor Relay Moisture Control Soil Sensor

Product Module: OKY3442-1

Product Description:

1. Using the company's high-quality soil sensors do detect soil moisture, the surface of nickel plated , has widened the induction area can improve conductivity, prevent contact with the soil rust problems and prolong life.
2. When two products can control a wide range of soil moisture , the corresponding threshold by adjusting potentiometer control , humidity is below the set value, start relay , while higher than the set value, the relay is disconnected.
3. Products with the delay function , delay of 3-5 seconds , when the humidity is detected in the critical state, the relay will not blink , flicker occurs.
4. High-quality products using Single relay can withstand 1500W load , to meet the requirements of most people.
5. Products with power indicator and relay instructions.
