Overview

Raspberry Pi Camera Module 3 is a compact camera from Raspberry Pi. It offers an IMX708 12-megapixel sensor with HDR, and features phase detection autofocus. Camera Module 3 is available in standard and wide-angle variants, both of which are available with or without an infrared cut filter.

Camera Module 3 can be used to take full HD video as well as stills photographs, and features an HDR mode up to 3 megapixels. Its operation is fully supported by the libcamera library, including Camera Module 3's rapid autofocus feature: this makes it easy for beginners to use, while offering plenty for advanced users. Camera Module 3 is compatible with all Raspberry Pi computers.¹

The PCB size and mounting holes remain the same as for Camera Module 2. The Z dimension differs: due to the improved optics, Camera Module 3 is several millimetres taller than Camera Module 2.

All variants of Camera Module 3 feature:

- Back-illuminated and stacked CMOS 12-megapixel image sensor (Sony IMX708)
- High signal-to-noise ratio (SNR)
- Built-in 2D Dynamic Defect Pixel Correction (DPC)
- Phase Detection Autofocus (PDAF) for rapid autofocus
- QBC Re-mosaic function
- HDR mode (up to 3 megapixel output)
- CSI-2 serial data output
- 2-wire serial communication (supports I2C fast mode and fast-mode plus)
- 2-wire serial control of focus mechanism

¹ Excluding early Raspberry Pi Zero models, which lack the necessary FPC connector. Later Raspberry Pi Zero models require an adapter FPC, sold separately.

Specification

Sensor:	Sony IMX708
Resolution:	11.9 megapixels
Sensor size:	7.4mm sensor diagonal
Pixel size:	1.4µm × 1.4µm
Horizontal/vertical:	4608 × 2592 pixels
Common video modes:	1080p50, 720p100, 480p120
Output:	RAW10
IR cut filter:	Integrated in standard variants; not present in NoIR variants
Autofocus system:	Phase Detection Autofocus
Dimensions:	25 × 24 × 11.5mm (12.4mm height for Wide variants)
Ribbon cable length:	200mm
Cable connector:	15 × 1mm FPC
Compliance:	FCC 47 CFR Part 15, Subpart B, Class B Digital Device Electromagnetic Compatibility Directive (EMC) 2014/30/EU Restriction of Hazardous Substances (RoHS) Directive 2011/65/EU
Production lifetime:	Raspberry Pi Camera Module 3 will remain in production until at least January 2030

Physical specification

Standard lens

Wide lens

Note: all dimensions in mm

Variants

	Camera Module 3	Camera Module 3 NoIR	Camera Module 3 Wide	Camera Module 3 Wide NoIR
Focus range	10cm–∞	10cm–∞	5cm–∞	5cm–∞
Focal length	4.74mm	4.74mm	2.75mm	2.75mm
Diagonal field of view	75 degrees	75 degrees	120 degrees	120 degrees
Horizontal field of view	66 degrees	66 degrees	102 degrees	102 degrees
Vertical field of view	41 degrees	41 degrees	67 degrees	67 degrees
Focal ratio (F-stop)	F1.8	F1.8	F2.2	F2.2
Infrared-sensitive	No	Yes	No	Yes

WARNINGS

- This product should be operated in a well ventilated environment, and if used inside a case, the case should not be covered.
- Whilst in use, this product should be firmly secured or should be placed on a stable, flat, non-conductive surface, and should not be contacted by conductive items.
- The connection of incompatible devices to Raspberry Camera Module 3 may affect compliance, result in damage to the unit, and invalidate the warranty.
- All peripherals used with this product should comply with relevant standards for the country of use and be marked accordingly to ensure that safety and performance requirements are met.

SAFETY INSTRUCTIONS

To avoid malfunction or damage to this product, please observe the following:

- **Important:** Before connecting this device, shut down your Raspberry Pi computer and disconnect it from external power.
- If the cable becomes detached, first pull forward the locking mechanism on the connector, then insert the ribbon cable ensuring that the metal contacts face towards the circuit board, and finally push the locking mechanism back into place.
- This device should be operated in a dry environment at 0–50°C.
- Do not expose to water or moisture, or place on a conductive surface whilst in operation.
- Do not expose to heat from any source; Raspberry Pi Camera Module 3 is designed for reliable operation at normal ambient temperatures.
- Store in a cool, dry location.
- Avoid rapid changes of temperature, which can cause moisture to build up in the device, affecting image quality.
- Take care not to fold or strain the ribbon cable.
- Take care whilst handling to avoid mechanical or electrical damage to the printed circuit board and connectors.
- Whilst it is powered, avoid handling the printed circuit board, or handle it only by the edges, to minimise the risk of electrostatic discharge damage.

Contenido:

Asegurarse que la versión de Raspberry Pi OS es la más actualizada posible, esto siempre es importante ya que existen mejoras y depuraciones en los drives que se usan para controlar todo tipo de hardware que se conecte a la Raspberry Pi.

En este caso existe una versión que salió en Feb/2023, fecha posterior al lanzamiento de estos modelos.

Raspberry Pi OS

Our recommended operating system for most users.

Compatible with:

All Raspberry Pi models

Raspberry Pi OS with desktop

Release date: February 21st 2023
System: 32-bit
Kernel version: 5.15
Debian version: 11 (bullseye)
Size: 924MB

Instalación de la cámara:

Colocamos el flexor en el slot dedicado para la cámara en la Raspberry.

Una vez hecho esto, encendemos la Raspberry Pi.

En el Menú principal buscamos la opción de “Raspberry Pi configuration” y en la pestaña de “Interfaces” seleccionamos la opción de Camera - Enable.

Una vez hecho esto, abrimos una terminal.

Ingresamos la primera instrucción que está en nuestra documentación de la librería “libcamera”.

- libcamera-hello

Para ver por unos segundos el previo de lo que visualiza la cámara.

- libcamera-jpeg -o test.jpg

Para tomar una foto y guardarla en la carpeta raíz.

Ubicamos la foto dentro de la carpeta raíz.
