Thick Film Hybrid IC

STK392-110

3-Channel Convergence Correction Circuit (I_C max = 3A)

Overview

The STK392-110 is a convergence correction circuit IC for video projectors. It incorporates three output amplifiers in a single package, making possible the construction of CRT horizontal and vertical convergence correction output circuits for each of the RGB colors using just two hybrid ICs. The output circuits use a class-B configuration, in comparison with the STK392-010, realizing a more compact package and lower cost.

Applications

- Video projectors

Features

- 3 output amplifier circuits in a single package
- High maximum supply voltage (V_{CC} max = $\pm 38V$)
- Low thermal resistance ($\theta_{j-c} = 3.0^{\circ}\text{C}/\text{W}$)
- High temperature stability (T_C max = 125°C)
- Separate predriver and output stage supplies
- Output stage supply switching for high-performance designs
- Low inrush current when power is applied
